

Introducing Zoom.

Meet the vehicle that takes
you off the pavement and into the
outdoors for fun and adventures.

The All Terrain Vehicle for All.

“I can go off the sidewalk, without polluting, without disturbing the wildlife, without any second thoughts. To just have fun.” BW

"Having a Zoom is being able to go to dog beach. Before the Zoom, I'd sit up on top of the hill and watch everyone playing with their dogs. The fact that I can actually get down there and run around with my dogs is fantastic." IB

For Johnny and his family, spending time outdoors is where they want to be. For years, he has struggled to keep up with them, but now with the Zoom, Johnny is back to leading the way.

"I had hundreds of people that complemented the look, speed and maneuverability of the Zoom. Now I can spend the whole day outside without the aches and pains, that in the past kept me confined." AB

"I think I have hunted more this year than probably the last four years combined. It's been a blast". CF

The Zoom expands the experiences of individuals with limited mobility, getting them into nature areas where other vehicles cannot take them.

Zoom has a permanent symmetrical 4-wheel drive designed for use in rough terrain. The patented frame design ensures that all four wheels stay in contact with the ground regardless of the type of surface. The Zoom makes it possible to increase the freedom of people who wish to be more independent in their daily life.

To simplify getting into and out of the Zoom the chair turns out sideways and the handlebar folds forward.

Zoom easily climbs obstacles and sidewalks thanks to the patented boggy divider technology. It is suitable for use off-road, where one generally can walk without climbing. The Zoom opens up a new world of possibilities, where barriers are easily overcome and obstacles are transformed into simple, pleasurable challenges.

Zoom's maximum speed is 12 mph and under optimal riding conditions on flat smooth surfaces, the batteries will last up to 25 miles of riding. For demanding riding in terrain, expect a range of 15-19 miles.

"Been to the woods, going through ditches, up and down hills. I am so pumped." AM

With Zoom driving in sand, snow, mud, uphill and downhill is a pure pleasure.

"I love the outdoors. I love to hunt. I love to fish. I love to be with my kids. The Zoom has been a game-changer for me." CF

Zoom has a unique design.

As the Zoom chair is only 220 pounds, you can roll it around by hand and two men can lift it into a SUV, pick-up truck or small trailer but we recommend using the aluminum ramps we offer.

Zoom provides an extraordinary driving experience. You drive a Zoom sitting down, using arms and hands only, making it the best solution for people with limited mobility to get off the sidewalk and into nature, parks or any other place that could be a challenge for a regular wheelchair.
